Experience

Northeastern University – Office of Global Services — OGS Student Support Staff Sept 2026 – Present

- Triage and resolve international student inquiries through daily in-person interaction, the ServiceNow (SNOW) case management system, and email, applying knowledge of immigration regulations and student status requirements in a fast-paced and sensitive environment.

Eli Lilly — Associate, Global Omnichannel and Strategy Operations (GOSO) Aug 2024 – Aug 2025

- Took end-to-end ownership of production features — scoping, implementing, and deploying pipelines using Python, AWS, Hive, and PySpark, processing datasets of 65M+ rows across US analytics systems.
- Built and owned 3 major Tableau dashboards and enhanced 3 existing ones, used by 20+ leadership stakeholders across all cross-functional teams to assess quarterly results and drive HCP engagement strategy.
- Led development of a centralized Reporting Hub consolidating 20+ dashboards adopted by 50+ global users across 11 teams, owning the full project lifecycle from ideation to deployment.
- Co-led optimization of an ML-based targeting platform managing data for 50M+ HCPs across the USA, contributing to an estimated 10–20% improvement in doctor engagement efficiency.
- Spearheaded a Point-to-Point Utilization System tracking 5 major teams and their sub-level project data, enabling leadership to eliminate redundant work and optimize cross-team project assignment.
- Delivered the Monthly Suggestion Report (Tableau) on a consistent monthly cadence to 20+ senior stakeholders, managing end-to-end QA validation and refresh cycles.
- Debugged and resolved production pipeline failures, performing root cause analysis and documenting fixes to maintain reliability across systems serving US-wide analytics operations.

Skills

Languages: Python, JavaScript, Java, C++, HTML, CSS

Engineering Practices: Git, GitHub, CI/CD Pipelines, Code Reviews, Open-Source Contribution, Technical Spec Writing

Backend & Systems: REST APIs, Microservices, Docker, System Design, Distributed Systems, AWS, Cloud-Native

Data & Databases: SQL, MySQL, MongoDB, Redshift, Hive, NumPy, Pandas

Machine Learning: TensorFlow, PyTorch, scikit-learn, CNNs

Technical Concepts: Data Structures & Algorithms, OOP, Operating Systems, Networking

Professional Skills: Project Ownership, Debugging & Optimization, Cross-Functional Collaboration, Technical Documentation

Projects

Evaluating Fairness-Accuracy Trade-offs in Automated Decision Systems Jan 2026 – Apr 2026

- Trained 3 ML classifiers on 30,162 records (up to 86.4% accuracy, F1: 0.70) and built a fairness evaluation pipeline measuring DPD and EOD across sex and race, surfacing 0% TPR for minority groups in baseline models.
- Implemented 2 bias mitigation interventions (threshold adjustment, sample reweighting) reducing EOD by up to 99.6% with under 4.3% accuracy loss.
- Technologies: Python, scikit-learn, NumPy, Pandas, Matplotlib, Jupyter

Freelance Project Bidding & Management System Sept 2025 – Dec 2025

- Built a full-stack Java + MySQL application with role-based dashboards (Client & Freelancer), supporting end-to-end workflows from project posting and bidding to contract management and payments.
- Engineered a 3NF schema with 9 tables, 3 stored procedures, 3 functions, and 4 triggers for automated business logic, with SHA-256 security, SQL injection prevention, and MVC-inspired architecture.
- Technologies: Java, MySQL, JDBC, Java Swing, Apache Maven, Git, GitHub, JUnit

Mind Body-In Sync: Your personal yoga companion Sept 2023 – June 2024

- Designed and trained a CNN-based system (VGG16) for real-time yoga pose estimation and posture correction, generating accuracy metrics and personalized feedback via web and mobile applications.
- Optimized inference latency for real-time usage and evaluated model performance across diverse pose inputs.
- Technologies: Python, JavaScript, HTML, CSS, Java, Firebase, TensorFlow, Keras, NumPy, Pandas, Matplotlib, PIL

Real-time Facial Emotion Recognition using Deep Learning Jan 2023 – June 2023

- Built an end-to-end deep learning pipeline using MobileNetV2 and CNNs for real-time facial emotion recognition across single and multi-face inputs, covering preprocessing, training, evaluation, and inference.
- Conducted exploratory data analysis and visualized performance metrics to interpret trends and model behavior.
- Technologies: Python, TensorFlow, scikit-learn, Google Colab, Jupyter

Education

Northeastern University, Boston, Massachusetts — Master of Science in Computer Science 2025 – Present

- Core Courses: Programming Design Paradigm, Database Management Systems, Algorithms, Foundations of AI, MLOps, Web Development and Design

BMS College of Engineering, Bangalore, India — Bachelor of Engineering in Information Science 2020 – 2024

- Core Courses: OOP, Computer Networks, Operating Systems, Machine Learning, Deep Learning, Web Application Development
